

# OPTIMA METAL WORKS LLC

**Maximize Your Space. Optimize Your Future.**

# Introduction

Optima Metal Works L.L.C. is a licensed company established under an open license, built upon the timeless principles of honest workmanship, reliable service, and practical engineering.

From our early beginnings in racking and shelving systems, we have grown into a trusted provider of comprehensive industrial storage solutions and custom metal fabrication services.

We design, fabricate, and install structures that enhance warehouse efficiency, maximize space, and support the daily operations of industries across the region.

Our expertise ranges from heavy-duty pallet racking and mezzanine floors to custom steel fabrication, sheet-metal work, industrial components, and structural steel supports.

Every product we deliver is shaped by skilled hands, engineered with care, and built to stand strong for years.

At Optima, we believe in working the traditional way—patiently, precisely, and with pride in every detail.

# Vision and Mission

## » Vision

To be a trusted name in industrial storage solutions—recognized for reliability, craftsmanship, and innovation. We aim to continually refine our methods, combining traditional integrity with modern efficiency to serve our clients better.

## » Mission

Our mission is to deliver practical, safe, and durable racking systems that maximize space and enhance productivity. Through consistent quality, honest service, and technical precision, we strive to build lasting partnerships with our clients and contribute to their long-term growth.

# Our Racking Systems

- **Heavy-Duty Pallet Racking System:** Built to withstand substantial loads, this system allows efficient pallet storage with easy forklift access. It ensures organized, high-capacity storage ideal for large-scale warehouses and logistics centers.

- **Slotted Angle Shelving System:** A flexible and economical option for light- and medium-duty use. Adjustable shelves and modular design make it suitable for workshops, offices, and general storage applications.

- **Rack-Supported Platform:** An efficient way to create additional working or storage levels. The racks themselves serve as the structure supporting an upper platform—ideal for maximizing space without the cost of permanent construction.

- **Structured Mezzanine Floor:** A custom-engineered flooring system that creates a second level within existing warehouse height. Perfect for expanding operations, it adds valuable space for storage, offices, or light manufacturing without requiring a new building.

- **Drive-In Rack System:** Designed for high-density storage of uniform goods. Forklifts can drive directly into the racking lanes, reducing aisle space and increasing storage efficiency for bulk items.

- **Medium-Duty Racks:** Suitable for general storage and manual loading, these racks offer excellent adaptability with adjustable shelves and sturdy construction—ideal for mid-weight goods and warehouse supplies.

# METAL FABRICATIONS

At Optima Metal Works L.L.C, our metal fabrication division expands our capabilities beyond storage solutions, allowing us to serve a wider range of industrial and commercial needs. We produce custom steel components such as frames, brackets, supports, platforms, sheet-metal parts, and welded assemblies tailored to each client's specifications. Every piece is shaped with careful workmanship, ensuring strength, precision, and dependable performance in demanding environments. Our skilled fabricators and welders follow proven methods, creating structures that stand up to daily use while maintaining safety and stability. To enhance durability, all fabricated items receive high-quality finishing such as powder coating or protective painting to guard against corrosion. Through this combination of craftsmanship and technical discipline, we deliver metal products that support warehouses, workshops, and various industrial operations with reliability and longevity.

# Our Services

## DESIGN & ENGINEERING

Every project begins with a deep understanding of the client's storage needs. We design systems that ensure safety, accessibility, and maximum use of space, following recognized standards for load-bearing and industrial safety.

## SUPPLY & INSTALLATION

Our skilled installation team ensures seamless setup and stable assembly on-site. We maintain a strong focus on safety, precision alignment, and timely completion, guaranteeing a smooth installation process that minimizes business downtime.

## MAINTENANCE & UPGRADATION

To extend system life and performance, Optima provides scheduled inspections, repairs, and reconfiguration services. We help clients adapt to changing storage demands by upgrading existing structures and improving load management efficiency.

## CONSULTATION & SUPPORT

We offer professional guidance on warehouse design, storage layout, and safety compliance. Our support extends beyond delivery and installation—building long-term partnerships grounded in trust and dependability.
